## EAZI LIFTER WINDOW CRANE

The Eazi Lifter Makes Light Work of Window Installations

The Eazi Lifter from Wood's Powr-Grip® is a lightweight and highly portable crane for lifting windows into multi-story buildings. This innovative lifter mounts easily in most window openings, using the extension tubes supplied (with ELCK), when necessary. The incorporated manual winch enables a single installer to safely raise a window from ground level up to three stories high, without any strain or danger to the operator. Supplied control straps allow a second worker to guide the window from the ground, in order to prevent damage from winds or building obstructions. Once the window reaches the opening, the Eazi Lifter automatically holds it in place for final glazing. By combining greater productivity with increased safety, the Eazi Lifter vastly improves window installation above ground level.

## BENEFITS:

- Installs windows above ground level with maximum efficiency and minimum operator effort.
- Eliminates trips, falls and strains from carrying windows up stairs and around corners.
- Avoids expense and inconvenience of scaffolding, scissor lifts or other access equipment.
- Increases productivity and profits, while reducing the risk of worker injuries and lost time.
- Eliminates strains or falls from carrying windows on ladders or wet access equipment.
- Easily clears porches, ledges and landscaping obstacles with supplied control straps.
- Designed specifically for use with Wood's Powr-Grip Original N-Series vacuum cups, including N4950, N5450 and N6450 (vacuum cups sold separately).

Step 1: Assemble the Eazi Lifter.

Step 2: Attach the Window.

In addition to the benefits for new construction, the Eazi Lifter also features even more advantages for window replacement in existing properties. Whether you are lowering old windows safely to the ground or hoisting new windows up for installation, the Eazi Lifter makes your job easier. No more wasting time laying down dust sheets on stairs and walkways, only to pick them up again later. No more tripping on stairs or floor coverings while carrying windows. No more strains or injuries from carrying awkward loads up stairs and around corners. No more worrying about incidental damage to building interiors. With the Eazi Lifter, now it is easy to work around existing landscaping and other obstacles!

Step 3: Winch up the Window.

In new construction, the Eazi Lifter features many advantages over conventional methods of installing windows in multi-story structures. The Eazi Lifter adapts to any job site, including those with muddy ground, tripping hazards, or slopes that prevent safe use of access equipment. The Eazi Lifter also speeds up installations while reducing the number of installers required. This saves time and labor, allowing other workers to be employed elsewhere for increased profitability. With the Eazi Lifter, strains and falls from carrying windows to rough openings are eliminated. Most work-at-height regulations simply do not apply, because installers never leave the building interior. Once a window is installed, the Eazi Lifter moves easily from one opening to the next.

Step 4: Guide the Window into Position, as Needed.

Step 5: Complete Final Installation of Window.
